CHALLENGE VS SOLUTION

SYMWAIR

SOLUTION

Efficient process automation and enhanced operational performance with no-code, low-code NETGRIF platform.

CHALLENGES

Inefficiencies, rigid workflows, high IT costs, compliance issues, poor visibility, scaling challenges, and integration gaps with low-code automation, real-time insights, and seamless collaboration

02.

PRODUCT

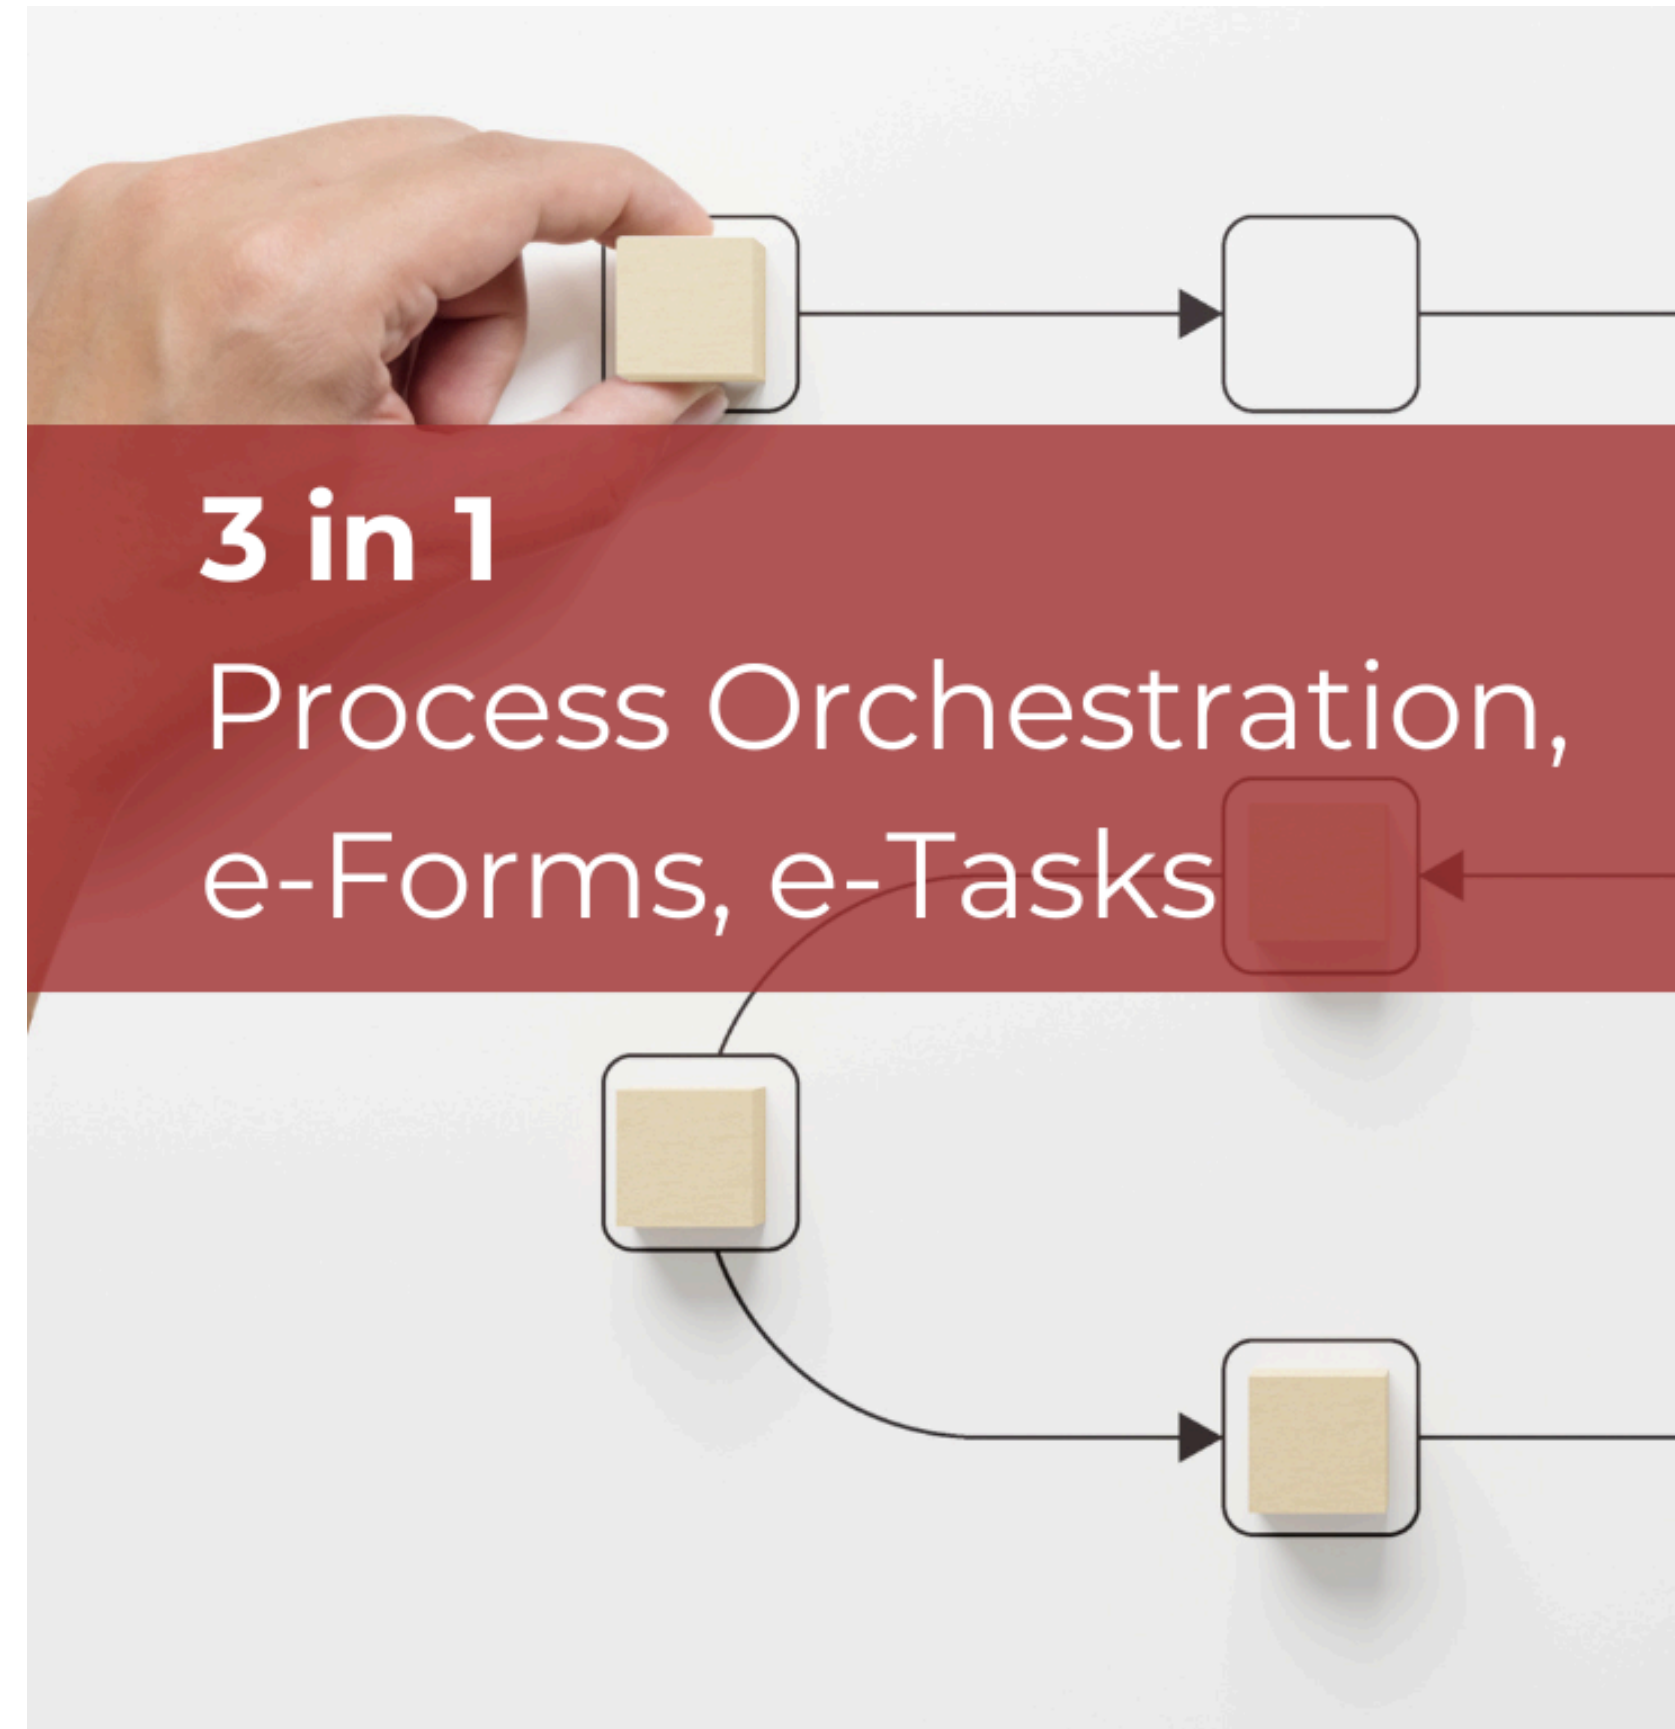

NETGRIF

Product

Netgrif is an innovative BPMS platform that enables rapid modeling, automation, and optimization of business processes without the need for complex programming.

1. **Process Orchestration** – Real-time workflow management and automation.
2. **eForms** – Dynamic digital forms without the need for programming.
3. **eTasks** – Intelligent tasks with automated assignment and escalation.
4. **Integration** with existing systems.

**3× FASTER THAN
OTHER LOW-CODE
SOLUTIONS.**

HOW TO BEGIN

POC

We will develop **two** application prototypes and provide expertise transfer so you can better understand and effectively use our platform.

4 WEEKS

10.000 EUR

MVP

We will develop **four** application prototypes, **deploying one** of the applications in a test environment. We also provide knowledge transfer that will allow you to better understand and effectively use the potential of our platform.

6 WEEKS

20.000 EUR

PoC (Proof of Concept)

1 Total price = 10.000 EUR

- **Services** 9.000 EUR
- **Licences** 1.000 EUR - EE (Enterprise Edition) for 3 months/ 10 users.

3 Key benefits

- We will develop two application prototypes and provide expertise transfer so you can better understand and effectively use our platform.

2 Scope & duration

- Duration **4 weeks**.
- Scope - As part of this offer, our experts will provide you with 15 business days of professional services, during which we will deliver: implementation, DevOps, analytics and testing services.

MvP (Minimum Viable Product)

1 Total price = 20.000 EUR

- **Services** 18.000 EUR
- **Licenses** 2.000 EUR – EE (Enterprise Edition) for 6 months/ 10 users.

3 Key benefits

- We will develop four application prototypes, deploying one of the applications in a test environment. We also provide knowledge transfer that will allow you to better understand and effectively use the potential of our platform.

2 Scope & duration

- Duration **6 weeks**.
- Scope - As part of this offer, our experts will provide you with 30 business days of professional services, during which we will deliver: implementation, DevOps, analytics services, and testing services.

OUR SERVICES

SYMWAIR

OUR COMPANY

Our mission is to **digitize manual and inefficient processes**, focusing on ease of use, flexibility, and a rapid return on investment.

We collaborate with **businesses of all sizes and industries**—from small and medium-sized enterprises to large corporations.

As a trusted **services partner of netgrif.com**, we bring expert IT consultants with deep industry knowledge.

OUR SERVICES

IN ALL PRODUCT LIFECYCLE STAGES

PLAN

During the PLAN stage, we help you define project goals, assess requirements, and design a clear roadmap for successful Netgrif implementation tailored to your needs.

BUILD

In the BUILD stage, we customize and integrate Netgrif solutions, developing tailored workflows and automating processes to meet your business needs.

RUN

In the RUN stage, we ensure seamless deployment, ongoing optimization, and continuous support to keep your Netgrif solutions running smoothly and efficiently.

WHY US

Comprehensive approach – From analysis to development to support.

Innovative technologies – We use AI, cloud, and the latest standards.

Fast implementation – Efficient delivery of solutions in a short time.

Security and reliability – Data protection and high availability of services.

WHY NETGRIF

100+

Completed projects
using Netgrif

30+

Years of R&D

100+ mil.

Running process cases

15+

Active Netgrif partners

CASE STUDIES

SYMWAIR

SSE

Customer Problem: Stredoslovenská energetika (SSE), a leading Slovak energy supplier, sought to enable customers to electronically sign electricity and gas contracts online. While they had existing systems like a document management system and customer portals, they lacked an integrated solution for electronic signatures and automated contract generation.

Solution: Netgrif developed a Business Process Management (BPM) platform that seamlessly integrated with SSE's existing systems, including electronic signature capabilities and automated document generation. This platform orchestrated the entire online contracting process, allowing customers to complete all contract-related tasks digitally.

Achieved Benefits: The implementation enabled SSE's household customers to conclude contracts electronically without in-person visits or physical signatures. This advancement improved customer convenience, streamlined internal processes, and positioned SSE to expand online services in the future.

AGEL

Customer Problem: AGEL, a healthcare provider in Central Europe, struggled with multiple software systems across hospitals, leading to inefficiencies, high training costs, and complex IT support.

Solution: Netgrif provided a centralized platform to streamline non-medical processes, integrating applications and creating a unified system for better collaboration and security.

Achieved Benefits: AGEL increased efficiency, reduced IT support, minimized training costs, and is on track to consolidate all non-medical agendas into one system, realizing cost savings and smoother operations.

TATRA LEASING

Customer Problem: Tatra-Leasing needed a solution to streamline communication and operations between dealers, importers, and the leasing company, as their existing systems lacked the necessary functionality.

Solution: Netgrif developed an Integrated Dealer Portal (IDP) that digitized processes, automated steps, and enabled real-time communication and data access between all stakeholders.

Achieved Benefits: The solution improved data quality, reduced costs, and enhanced dealer and importer relationships. The portal became the preferred communication channel, providing a single point of truth and enabling scalability.
